WE MAKE WOOD WORK!

Hardwood Components, Quality Millwork & Custom Finishing

Why Choosing an Outsource Partner Makes Good Sense

Outsourcing wood components makes good sense. It can oftentimes save money and enables you to take advantage of other's design and production expertise, thereby saving on the personnel and capital expenditures that would otherwise be required if you were to produce the parts in-house.

If any of these thoughts run through your head, outsourcing is most likely the best decision you can make:

- I need to increase my productivity, quality, consistency and efficiency
- I'd like to expand my product offerings
- I have trouble training new employees
- I could get more sales if I just had the time
- Machinery costs too much
- It's hard to know exact job costs before starting

Typically used for furniture, cabinets, building materials and other decorative wood products, dimensioned wood products include: cut-to-size blanks, edge-glued panels, solid or laminated squares, mouldings, turnings, bendings, upholstered frame stock, interior trim, millwork, staircase parts and component parts for cabinets, such as cabinet doors, face frames, and drawer sides and fronts.

Specified by thickness, width, and length, dimension products are classified into three types: rough dimension, semi-machined dimension or fully mechanized dimension.

Rough dimension stock consists of blanks cut and ripped to specific sizes, normally rough surfaced two sides or more to a nominal size.

Semi-machined dimension is rough dimension parts carried one or more steps further in the manufacturing process, including: finish surfacing, moulding, turning, tenoning, flat sanding, edge or face gluing, equalizing, trimming, mitering, etc., but which will not make the product a completely machined part ready for assembly.

Fully machined dimension parts are completely machined with no additional work necessary prior to assembly. A final polish sanding operation may be required prior to finishing or painting.

What to ask before buying

The secret to buying dimension products is communication. Tell your dimension suppliers exactly how the part is going to be used in your finished product. Discuss tolerances, specifications, and quantities with your dimension suppliers. Ask them for suggestions to improve lumber yields, production efficiencies, product quality and ways to reduce costs – especially material costs. Since material costs account for over half of the total cost of producing dimension, the use of lower grade materials and optional species can result in dramatic savings. Be sure to discuss alternative solutions to meet your needs.

Dimension buyers also should specify the minimum requirements possible in order to maximize the wood utilization and minimize their costs. To arrive at the most efficient cost, dimension buyers are encouraged to specify only those faces and tolerances necessary to produce a satisfactory wood component product suited to the end use. All too often, a higher grade of material is specified than is actually needed. When this happens, it means the dimension purchaser is paying more than is necessary.

The WCMA publishes the ***Rules and Specifications for Dimension and Woodwork*** rulebook to serve as a useful guide for dimension & component manufacturers and buyers. It is intended to standardize the methods and procedures for specifying, purchasing, and designing these products. Contact

the WCMA office for more information at www.wcma.com or 651-332-6332.

How to Find Suppliers

The WCMA represents manufacturers of dimension and wood component products who can supply any component you might need for cabinetry, furniture, architectural millwork, closets, flooring, staircases, building materials, and decorative/specialty wood products made from hardwoods, softwoods, and a variety of engineered wood materials.

The WCMA makes it easy for buyers to find WCMA members that can produce the wood component products they need. Beginning on page 9 of this guide is a list of WCMA members with their product offerings, location, and contact information.

10 REASONS TO OUTSOURCE DIMENSION & WOOD COMPONENTS

1. Outsourced components can cost less than producing in-house.
2. You do not have to have the manufacturing capabilities or space in your own shop.
3. It allows you to take advantage of others' expertise in design and manufacturing.
4. It can increase your productivity and efficiency in other areas.
5. It saves you time, allowing you to focus on more important things.
6. Outsourcing can reduce your capital expenditures.
7. Oftentimes it enables you to obtain better product quality and consistency.
8. It allows you to reduce your inventory and overhead.
9. Outsourcing allows you to concentrate on your own product development.
10. It enables you to offer an expanded variety of products to customers.

Buyer's can also see a list of our members on our website at www.wcma.com, click on "Manufacturer Member Directory" under "Manufacturers".

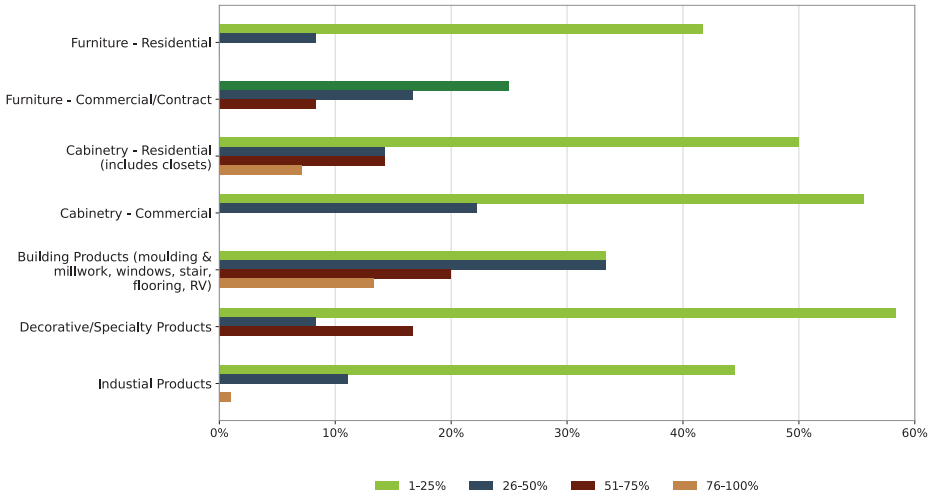

Study reveals component market trends

Residential Cabinetry Leads Growth Opportunities for Wood Component Manufacturers

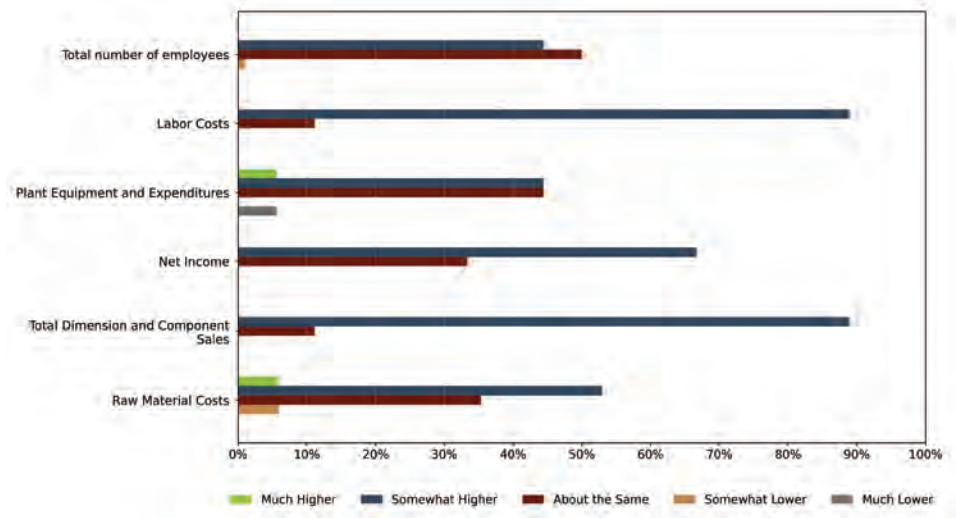

The outlook for the wood products industry remains positive, with demand in cabinetry, furniture, decorative/specialty products, and building products all expected to increase over the next several years. For wood products, millwork, cabinetry, and component manufacturers, the strongest opportunities appear to be tied to remodeling activity, kitchen and bath upgrades, custom cabinetry, and higher-value decorative products rather than relying solely on new residential construction. These trends are particularly encouraging for component and dimension manufacturers that supply materials and parts to those sectors.

A recent survey conducted by the Wood Component Manufacturers Association (WCMA) highlights where manufacturers are currently finding their greatest opportunities. The 2026 Wood Components and Dimension Benchmark Study, conducted online this spring, provides insight into market sales, product categories, business performance projections, and other key industry metrics.

What Markets are you Selling to?

Compared to 2025, what are your company's 2026 projections?

Residential Cabinetry Dominates Sales Mix

The survey found that residential cabinetry is the most significant end-use market for participating manufacturers. Among respondents serving the residential cabinetry sector, half reported that cabinetry accounts for between 1% and 25% of sales, while another 29% indicated the segment represents more than 25% of their sales. Notably, 21% reported residential cabinetry accounts for more than half of their total sales.

Residential furniture also remains an important market, with 42% of respondents reporting that it represents between 1% and 25% of sales. Another 8% reported residential furniture accounts for between 26% and 50% of their sales.

Commercial markets continue to provide meaningful opportunities as well. Among respondents serving contract furniture customers, approximately one-quarter reported that the segment represents between 26% and 50% of sales, while commercial cabinetry accounted for between 1% and 25% of sales for more than half of participating companies.

Diverse End Markets Support Industry Stability

Beyond cabinetry and furniture, respondents reported strong participation in several additional sectors.

Building products—including moulding, millwork, windows, stair parts, flooring, and RV components—remain a significant market, with one-third of respondents indicating the category accounts for between 1% and 25% of sales and another third reporting it represents between 26% and 50% of sales.

Decorative and specialty products, including musical instruments, caskets, toys, gifts, and novelty items, also represent an important source of revenue. Nearly 60% of respondents indicated the category accounts for between 1% and 25% of sales, while another 25% reported it represents more than 25% of sales.

Industrial products, such as tool handles and other industrial wood components, round out the market mix, helping manufacturers maintain diversified customer bases and reduce reliance on any single industry segment.

Cabinet Components Continue to Lead Production

When asked about the products they manufacture, cabinetry-related components remained the dominant category. Because respondents could select multiple product types, 41% indicated they produce cabinet parts, 35% manufacture solid wood cabinet doors, and 30% produce cabinet doors made from composite panels.

Hard Maple Remains the Species of Choice

Among hardwood species, Hard Maple continues to be the most widely used material among surveyed manufacturers, followed by White Oak, Poplar, Red Oak, Walnut, and Soft Maple.

Looking Ahead

The survey results reinforce broader industry forecasts pointing toward continued growth in remodeling and renovation activity. Residential cabinetry, building products, and decorative specialty markets appear especially well positioned for expansion, creating opportunities throughout the supply chain.

For component and dimension manufacturers, success over the next several years will likely be driven by serving markets connected to home improvement, customization, and value-added wood products. As consumers continue investing in their homes, suppliers that support cabinetry, millwork, and specialty product manufacturers should remain well positioned for growth.

For more information about the Wood Components Benchmark Study, visit WCMA.com

WCMA – How We Can Help You Succeed

If you are a manufacturer of wood components or dimension, membership in the Wood Component Manufacturers Association is now more important than ever. The WCMA is committed to becoming a progressive, nationally recognized association whose focus is meeting the needs of its members.

WCMA membership involves many things, but first and foremost, it provides access to a wide range of industry experts. Your colleagues are often your best source for in-depth insight and ideas. WCMA gives you the opportunity to connect with industry professionals across the United States and Canada, and members share openly, freely, and with great enthusiasm. In addition, the association offers the following to its members:

Networking Opportunities

The number one benefit of membership in the WCMA, according to our members, is the multitude of networking opportunities we offer throughout the year. We strive to offer our members the opportunity to network with other manufacturers across the nation in a non-competitive atmosphere through trade shows, on-line discussion forums, roundtable dinners, plant tours, and other social events. Many WCMA members also take advantage of the opportunities to do business with each other.

WoodTech Connect Plant Tour Event

Each year, the WCMA hosts our WoodTech Connect Plant Tour Event. By touring dimension and component manufacturing facilities, members see the latest technology at work, witness working solutions to common problems, and exchange information with seasoned counterparts. Held in the spring each year, this event enables members to conduct their own field research as well as gather a host of money-making, money-saving ideas.

European Plant Tour Event

The WCMA hosts European Plant Tour events to provide an opportunity for members to observe advanced woodworking and manufacturing facilities in Europe and observe leading-edge solutions to improve their quality and production methods. This is an excellent opportunity for attendees to discover "what's next" in the global woodworking industry, where trends come from, and gain insights into making their business more successful.

Spotlight Tour Event

The WCMA hosts Spotlight Plant Tour Events. These events focus on a specific region and is short enough to be out of the office for only one or two days, yet still see advanced manufacturing plants.

Get New Business

Sales inquiries from component buyers are received by the WCMA office on a regular basis, and the WCMA shares those inquiries with active members. Members also find new business opportunities during our in-person events by networking with attendees.

Trade Promotion

The WCMA participates in several promotional programs for the purpose of promoting the products of our industry and generating more business for our members. Our promotional activities include: Exhibiting at trade shows, like IWF, and highlighting the various products produced by WCMA member companies; participating in specialized woodworking industry events and seminars; and joining forces with other associations regarding important issues to our industry like the Real American Hardwood Coalition

(RAHC), and the Wood Industry Resource Collaborative (WIRC)

Members' Website

The newly designed WCMA website, at www.WCMA.com features a simplified design, improved functionality and more content to keep members and visitors up-to-date on the latest news in the secondary wood manufacturing industry. The site is a resource where members can update their online profile, register for meetings, keep current on industry issues and initiatives, and more! It is a comprehensive and easy to navigate site that serves as a one stop site for all the information you need on the industry including the WCMA Labor Relations Bulletin, Legislative News, Virginia Tech Housing Reports, and other important Industry News and Events.

As a company in the wood components industry, one of the wisest investments

you can make is membership in the WCMA. To take advantage of these many member benefits, please visit the website today and fill out the membership application. You can also contact the WCMA office with any questions.

Many Resources. One Source.

The Wood Component Manufacturers Association is your One Source for Many Resources. The benefits of working with WCMA member companies are clear, manufacturers that outsource components are more profitable than those that don't, period. Outsourcing is most likely the best decision you can make.

With members located throughout the U.S and Canada, finding a supplier that can consistently produce quality components and be responsive to your needs is easier than ever before. Just visit the WCMA online Member Match/Source Guide program, or call the WCMA office, and get a list of WCMA member companies that will meet your exact requirements for dimension and component products, from hardwoods, softwoods, and engineered wood materials. It's that easy, give it a try today!

Are you a Component Manufacturer?

Join the WCMA and prosper! Take advantage of WCMA's many promotional, educational and research activities to grow your business. We can help wood component manufacturers find new markets and customers for the products you make. Join today at **www.wcma.com**.
